ABOUT US

We want to replace motorised urban freight transport by urban sustainable freight. Cars and vans provide most of the freight transportation and pollution inside the cities. This pollution can be suppressed by using intensively all the possibilities offered by sustainable transportation (bikes, cargo, tricycle, electric vehicles,..).

Bikemike is the sustainable good and waste transportation for enterprise, ecommerce and cities. Less CO2 and pollution, more consumer experience, more healthy citizen. Thanks to our platform, our technology and our expertise we provide an all in one solution for our customers : the logistics, the messengers fleet, the cloud mobile app.

We are involved in circular economy, giving the opportunity for cities and their partner to use our software solution to combine ecommerce deliveries with waste collection, lowering the costs of waste transportations. Finally our tools are optimal to create your own projects as for example creating access jobs in poor sub-urban areas.

AREAS OF ACTIVITY

Sustainable Buildings and districts

- ICT for cities, Smart cities and communities

Energy efficient mobility and transport

- Sustainable mobility electric vehicles
- ICT applications for sustainable mobility
- Transport and logistics Energy management

Services

- Planning services
- Software development
- Research and Development
- Other services
