ABOUT US

The activity of the institute covers scientific and technological research and development, and consulting. The main object is to serve the sustainability and environment friendliness of agricultural and horticultural production and renewable energy production.

At present, the main fields of the institute are:

- Expert advising on nutrient supplementation based on accredited soil nutrient analysis and coupled with precision GPS soil and/or plant sampling
- Development of agro-technology of plants based on labor-, greenhouse- and field experiments
- Research of complete utilization of biomass (agricultural wastes and by-products) for renewable energy, especially for biogas
- Publishing activity in own serials and other journals, takes part and organizes, conferences, meetings and field demonstrations

AREAS OF ACTIVITY

SERVICES

- Research
- Technology transfer
- Consultancy

TECHNOLOGIES

- Biotechnology
- Ecology and environment

INDUSTRY

- Agriculture
- Biotechnology
- Green technology & Sustainability
- Raw Materials
- Recycling

Survey and enhance the bioenergy production in Danube region

Survey and analyze the plant production and possible raw materials for bioenergy in Danube Region.

Laboratory experiments and field trials.

OWN EXPERTISE AND KEYWORDS

We had experiences in survey and analyses of sugarbeet production. We published the data last year in Danube Region Conference in Pécs.
