ABOUT US

ANALISIS-DSC is a basic engineering services company specialized in industrial products and industrial processes optimization using CAE (Computational Aided Engineering) software tools. We develop projects to solve:

- Fluids and thermodynamics problems, using CFD (Computational Fluid Dynamics) tools.
- Particle and bulk problems, using DEM (Discrete Elements Modelization) tools.
- Mechanical problems, using FEA (Finite Elements Analysis) tools.

ANALISIS-DSC has experience and references in different industrial sectors such as aerospace, ventilation, hydraulics, chemistry, steel, automation, etc.

We are partners in a SPIRE H2020 project for bulk material management and we would like to become partners in other EU funding projects.

AREAS OF ACTIVITY

Sustainable Buildings and districts

- Ventilation
- Energy saving

Renewable Energies

- Bioenergy and biofuels
- Solar energy technology
- Water power technology
- Wind power technology
- Wave power technology
- Photovoltaic solar Heating
- Others - Renewable Energy

Energy efficient mobility and transport

- Hybrids, hydrogen, hydro-methane, fuel cell vehicles
- Sustainable mobility electric vehicles
- Alternative liquid and gaseous fuels
- ICT applications for sustainable mobility
- Transport and logistics Energy management
- Efficient Urban mobility

Energy management

- Energy efficiency
- Energy recovery
- Heating system

Services

- Research and Development
- Other services
