ABOUT US

Saudi Aramco is a fully integrated energy enterprise that manages the world's largest proven conventional crude oil reserves. As the world's largest oil producer and exporter, Saudi Aramco is willing to develop sustainable oil-based transport solutions and established a research center in the Paris area on fuel and engine co-optimization for sustainable well to wheel GHG and emissions reduction, through collaborative research projects involving reputable research institutes such as IFPEN and automotive industry key players such as PSA Peugeot-Citroen.

Our goal is to extend our collaboration portfolio and transfer the Gasoline Compression Ignition fuel and engine technologies we have been developing for passenger cars to Heavy Duty Vehicles to reduce the global carbon footprint at both refinery and vehicle levels, and EU dependence to Diesel.

AREAS OF ACTIVITY

H2020 2017 Call Topics - Green Vehicles

- GV-01-2017: Optimisation of heavy duty vehicles for alternative fuels use
