

Spain, EE-09-2016-2017

UNEF is the trade union of the solar photovoltaic energy in Spain.

With a representation of 250 companies and over 85% of the sector's activity in Spain, UNEF speaks for virtually all industry producers, installers, engineers, manufacturers of modules and solar components, distributors and consultants.

UNEF:

- Promotes the development of the PV sector at the national and international levels;
- Encourages the development of solar energy consumption;
- Encourages improvements in professional development in the photovoltaic sector;
- Defends regulatory stability and legal certainty;
- Acts as the institutional representative of the PV sector;
- Defends the interests of partners at national, regional and international levels.

UNEF integrates all stakeholders and interests of the complex Spanish PV sector, regardless of their activity or size, at both national and regional levels.

The level of technical expertise in the PV sector combined with the excellent relations UNEF has with all stakeholders would make us a useful and reliable partner. UNEF could support the dissemination and communication plans, the organization of engaging activities, events, meetings, and assist with many other tasks.
