ABOUT US

The **Centre for Ecological Research, HAS** is the home of researchers from various disciplines, including ecology, botany, hydrobiology, meteorology, agronomy, forestry, as well as interdisciplinary sciences.

New research projects and their involvement in both global and EU level policies on ecosystem services shows the Centre's commitment to putting biodiversity into a wider context.

The Centre is the largest ecology institute in Hungary, and therefore it is dedicated to being an advisor to the nation on issues related biodiversity and ecosystems, and also responsible for supporting the development of ecology in Hungary.

AREAS OF ACTIVITY

SERVICES

- Research

TECHNOLOGIES

- Ecology and environment
- Life Sciences, Medicine & Pharmaceuticals Mechanical engineering

INDUSTRY

- Forestry & wood
- Green technology & Sustainability
- Water management
- Other
